1

An Evolutionarily Significant Unit, or “ESU”, is a distinctive group of Pacific salmon or steelhead. NOAA Fisheries considers an ESU a “species” under the ESA

2

Updated final listing determinations for 16 salmon ESUs were issued on June 28, 2005 (70 FR 37160). On September 2, 2005, we issued final critical habitat designations for 19 West Coast salmon and steelhead ESUs (70 FR 52488 and 52630).

3

The final listing determinations for the Oregon Coast coho ESU and ten *Oncorhynchus mykiss* ESUs have been extended for 6 months until December 12, 2005. See the announcements published in the *Federal Register* on June 28, 2005 (70 FR 37217, and 70 FR 37219).

A petition to list Puget Sound steelhead was received on September 13, 2004. The ESU is currently under review.
